

# E-Learning

A testing module which is accurate and automated

Contegro®

The Contegro eLearning® module is ideal for online training courses, quizzes, tests or exams with automatic marking to help streamline online learning. It's a great option to keep mobile sales staff correctly informed and trained on new products and services!

This module is strategically designed to automatically mark a question and return a 'Pass' or 'Fail' result when answers are submitted, so candidates will know immediately if they have passed or not.

Tests are setup within the Form Builder add-on module and can be easily linked together, so that successful candidates can progress onto subsequent tests - which is a feature that significantly sets this module apart from others and is effective for administration and reporting.

## Suitable Uses

- » Up-skilling staff
- » Training off-site sales staff
- » In-house staff learning
- » Class-room quizzes and tests

## Required Modules

- » Form Builder

## Key Features

### 100% Accurate

The module compares submitted values (answers) against a list of correct values in the database, so there's no cheating!

### Multiple Answer Fields

Test answers can be set to any of the following field options: Drop Down and Multi Select Lists, Radio Buttons & Check Boxes.

### Result Options

The results can be shown in the following options: the result can be displayed on screen on a conclusion page, sent via email and the module can also add the candidate (a logged in member) user to a group, such as a 'pass' group to enable them to proceed to other tests.

### Automatic Notifications

Messages and notification emails can be worded to suit your requirements. For example:

*You have passed Training Module 1 with a Score of 5 out of 5.  
Your Correct answers were: 1, 2, 3, 4, 5  
Please continue to Training Module 2.*

### Reporting

A detailed reporting function (accessible through the Form Builder Module), enables you to see all candidates that have passed a test.

Questions and answers are easy to administer within the familiar Form Builder Module

The screenshot displays the 'Training Module: Joints and Bone' interface. It features a sidebar with a list of training modules: Foundation Training Modules, Digestion, Heart and Circulation, Joints and Bone (highlighted), and Nutritional Essentials. The main content area contains three multiple-choice questions:

- Which of the following is one of the two differing kinds of joints found in the body? \*
  - Sinuival
  - Fibrocartilagenous
  - Fibrocytosis
  - Sinusitis
- Which of the following is not a structural feature of synovial joints? \*
  - The articular capsule
  - Tendons & ligaments
  - Vertebrae
  - Cartilage
- Which of the following is NOT a risk factor for the development of osteoporosis? \*
  - Insufficient weight bearing exercise
  - Poor saturated fat intake
  - Poor vitamin D metabolism
  - Poor dietary intake of Calcium or Protein

At the bottom, a 'Results' box shows: 'Please try again', 'You have not passed this module.', and 'You scored 4 out of 12'.

Forms are clear to use and an accurate 'pass' or 'fail' is obvious upon completion.
